

# **Our Lady Queen of Peace**

## **Computer Curriculum**

### **Mission**

Computer classes will aid students by giving them the instruction and practice time necessary to make the best use of technology as a tool for increased learning and productivity. Use of technology will be inclusive of all students and integrated into all curricular areas. Technology should be used as a vehicle of analysis, research, creativity and communication in the light of the values and teachings of the Catholic values, moral decision-making and the Queen of Peace School mission of responsibility, respect and love.

### **Vision**

We are committed to educate and empower administrators, teachers and students to become self-directed, continuous learners and ethical, responsible citizens prepared to meet the increasing challenges of a global society.

Administrator, teachers, and students should become proficient in the use of technology in an endeavor to discover ways that technology can be put to the service of God.

Technology should be used as a vehicle of analysis, research and communication in the light of Catholic values, moral decision-making and the Queen of Peace School mission of responsibility, respect and love

### **Key**

I = Introduce

R= Reinforce

IU = Independent Use

**1. Understands computer terms and skills involved in successful computer operations.**

use of commercial database					I	R	R	IU	IU
use of student created database							I	R	R
use of internet				I	R	R	R	R	R
produce research project incorporating information retrieved from at least two different types of sources						I	R	R	IU

**INFORMATION ORGANIZATION**

identifies useful information from search					I	R	R	R	R
takes notes/paraphrase from search					I	R	R	R	IU
cites electronic sources for bibliography							I	R	R

**INFORMATION ANALYSIS**

compares information from at least two sources						I	R	R	R
identifies trends in data							I	R	R

**ASSESSMENT**

The majority of computer assessment is performance based. Assessment is based on the work that students do.

1. Students may be given a task to do and provided with a model or sample to show them what is expected. Each project requires the use of the computer skill currently being practiced. The finished product will then be printed and/or saved and compared to the sample for assessment.
2. Students may be asked to complete a project that uses targeted computer skills without being shown a model. All products are not expected to be alike. Student creativity is encouraged as long as the finished product is within the product guidelines

Since there are often many ways to complete a computer task, teacher observation is important. Teachers need to observe whether students are actually using the targeted skills to complete the project. For example, are students actually using the correct fingering to type?

The themes for computer projects should be taken from the student's classroom units and themes. This integration provides a unique way to extend and reinforce classroom learning.
