### Women in STEM Scholarship Opportunity 46 Women to Receive Full Room & Board Scholarships!

In an effort to recruit and graduate more women in VU's top-rated College of Technology, Vincennes University is offering 46 scholarships for a new on-campus technology living/learning community exclusively for women. In addition to offering the lowest tuition rate among all residential institutions, VU will offer this cohort of women nearly \$20,000 each in Room and Board Scholarships - fully covering the cost of their Room and Board expenses.

This innovative program focuses on preparing students for high-demand, high-wage careers including advanced CNC machining, advanced manufacturing automation technology, industrial maintenance, architectural studies, computer integrated manufacturing, construction, John Deere and Diesel, electronics, precision machining, product design and production processes, surveying and welding.

Students selected for the program will reside with their academic peers in the Ebner Technology Living/Learning Community located in the College of Technology. Students who reside in Ebner Hall have after-hour access to the Technology labs and learning spaces.

#### Program Guidelines

- Applicants must be nominated by a manufacturer or industry-related partner.
- Students will be selected based on the quality of their industry partnership and their passion for their chosen career path.
- The application process is not academically competitive but students must remain in good academic standing and on their career pathway to program completion to remain eligible.

The College of Technology Scholarships for Women are offered on a "first-come, first-served" basis. For more information or to nominate a student, contact Diana Hatton at 812-888-5101 or [dhatton@vinu.edu](mailto:dhatton@vinu.edu).
