

Ganado Unified School District

BIOLOGY/ GRADE 9th-12th

PACING Guide SY: 2017-2018

Timeline & Resources	AZ Standard	Essential Question (HESS Matrix)	Learning Goal	Vocabulary (Content/Academic)
1st Quarter Week 1 <ul style="list-style-type: none"> Resource Book Power Point Presentation Work Sheets 	Strand 1: Inquiry Process Concept #3: Analysis, Conclusions, and Refinements <ul style="list-style-type: none"> Evaluate experimental design, analyze data to explain results and propose further investigations. PO 1: Interpret data that show a variety of possible relationships between variables.	<ul style="list-style-type: none"> What are the differences between observation and inference? What are the differences among a control, independent variables and dependent variables? What are the scientific methods a biologist uses for research? Why are the metric system and SI important? 	I will be able to: <ul style="list-style-type: none"> Compare an observation and an inference Describe and differentiate control, independent variables and dependent variables Identify scientific methods that will be used at Biological Research Describe the importance of Metric System and SI unit. 	<ul style="list-style-type: none"> Observation Inference Scientific method Hypothesis Control group Experimental group Independent variable Dependent variable Constant Data Metric system SI unit
Week 2 <ul style="list-style-type: none"> Resource Book 	Strand 1: Inquiry Process Concept #4: Communication PO 1: For a specific investigation, choose an appropriate method for communicating the results.	<ul style="list-style-type: none"> What is axis? Legend or key? What is the importance of graph for 	I will be able to: <ul style="list-style-type: none"> Define axis, legend and key Describe graph 	<ul style="list-style-type: none"> Axis Graph Legend Key

<ul style="list-style-type: none"> • Power Point Presentation • Scientific experiments 	<p>PO 2: Produce graph that communicate data</p> <p>PO 3: Communicate results clearly and logically</p> <p>PO 4: Support conclusions with logical scientific arguments</p>	<p>scientific research or study?</p> <ul style="list-style-type: none"> • What are the different form of graph? • What are the different components that support a given conclusion? 	<ul style="list-style-type: none"> • Identify the different forms of graph used to interpret data • Name several components and factors that will best support a given conclusion 	<ul style="list-style-type: none"> • Positive • Negative • Relationship • No relationship • Frequency • Result • Mean
<p>Week 3</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Strand 1: Inquiry Process</p> <p>Concept 1: Observations, Questions and Hypotheses</p> <p>PO 1: Evaluate scientific information for relevance to a given problem</p> <p>PO 3: Formulate a testable hypothesis</p> <p>PO 4: Predict the outcome of an investigation based on prior evidence, probability and/or modeling</p>	<ul style="list-style-type: none"> • How scientific information can be relevant to a given problem? • What are the different ways to test a hypothesis? • How to formulate a testable hypothesis? • How scientific investigation conducted? • What is the relationship between predicting outcome using evidence, probability and/or modeling? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Describe the relevance of scientific information to a given problem • Identify ways to test hypothesis • Formulate a testable hypothesis • Conduct a simple scientific investigation • Predict the outcome of an investigation based on prior evidence, probability and/or modeling 	<ul style="list-style-type: none"> • Test tube • Beaker • Evidence • Accuracy • Precision • Theory • Predict • Percentage

<p>Week 4</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Strand 2: History & Nature of Science</p> <p>Concept 1: History of Science as a Human Endeavor</p> <ul style="list-style-type: none"> • Identify individual, culture, & technological contributions to scientific knowledge. <p>P.O. 1: Describe how human curiosity and needs have influenced science, impacting the quality of life worldwide.</p> <p>Concept 2: Nature of Scientific Knowledge</p> <ul style="list-style-type: none"> • Understand how science is a process of generating knowledge. <p>P.O. 1: Specify the requirements of a valid, scientific explanation (theory), including that it be:</p> <ul style="list-style-type: none"> - logical - subject to peer review public - respectful of rules of evidence <p>Strand 4: Life Science</p> <p>Concept 3: Interdependence of Organisms.</p> <p>P.O. 2: Describe how organisms are influenced by a particular combination of biotic and abiotic factors in an environment.</p>	<ul style="list-style-type: none"> • What is biology? • What are possible benefits of studying biology? • What are the characteristics of living things? • What are the characteristics of scientific inquiry? • What are the difference between science and pseudoscience? • Why is scientific literacy important? • What is the difference between abiotic and biotic factors? • What are the interactions between the levels of 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Define biology • Describe the possible benefits of studying biology. • Identify the characteristics of living things • Describe the characteristics of scientific inquiry. • Compare science and pseudoscience. • Describe the importance of scientific literacy. • Compare biotic and abiotic factors. • Describe the interactions between the levels of biological communities. • Compare habitat and niche. 	<ul style="list-style-type: none"> • Biology • Organism • Organization • Growth • Development • Reproduction • Species • Stimulus • Response • Homeostasis • Adaptation • Science • Law • ethics • Ecology • Biosphere • Biotic factor • Abiotic factor • Population • Biological community • Ecosystem • Biome • Habitat
---	---	--	--	--

		biological communities? <ul style="list-style-type: none"> • What is the difference between an organism's habitat and its niche? 		<ul style="list-style-type: none"> • Niche • Predation • Symbiotic • Mutualism • Commensalism • Parasitism
--	--	---	--	--

Week 5 <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	Strand 4: Life Science Concept 3: Interdependence of organisms. P.O. 1: Identify the relationships among organisms which populations, communities, ecosystems and biome. Concept 5: Matter, Energy, and Organization in Living Systems. P.O. 4: Diagram the energy flow in an ecosystem through a food chain P.O. 3: Diagram the Biochemical cycles in an ecosystem.	<ul style="list-style-type: none"> • What are the producers and consumers in an ecosystem? • How does energy flow through an ecosystem? • What are food chains, food web and ecological pyramid models? • How do nutrients move through biotic and abiotic parts of an ecosystem? • Why are nutrients important to living organisms? • What are the biogeochemical cycles of nutrients and 	I will be able to: <ul style="list-style-type: none"> • Define producer and consumer • Describe how energy flows through an ecosystem • Define food chain and food web. • Compare food chain and food web • Describe ecological pyramid models. • Describe how nutrients move through biotic and abiotic parts of an ecosystem. • Explain the importance of nutrients to living organisms. Describe the different biogeochemical cycles. • Describe how unfavorable abiotic and biotic factors affect species do. 	<ul style="list-style-type: none"> • Community • Limiting factor • Tolerance • Ecological succession • Primary succession • Climax community • Secondary succession • Weather • Latitude • Climate • Tundra • Boral forest • Temperate forest • Woodland • Grassland • Desert • Tropical savanna • Tropical seasonal forest • Tropical rainforest
--	---	--	---	--

		<p>how are they alike?</p> <ul style="list-style-type: none"> • How do unfavorable abiotic and biotic factors affect species? • How do ranges of tolerance affect the distribution of organisms? • What are the stages of primary and secondary succession? • How is latitude related to the three major climate zones? • What are the major abiotic factors that determine the location of terrestrial biome? • How are the terrestrial biomes distinguished based on climate and biotic factors? 	<ul style="list-style-type: none"> • Explain how ranges of tolerance affect the distribution of organisms. • Identify the different stages of primary and secondary succession. • Compare primary and secondary successions • Describe how latitude relates to the three major climate zones. • Identify the major biotic factors that determine the location of terrestrial biome. • Distinguish terrestrial biomes based on climate and biotic factors. 	
Week 6	Strand 4: Life Science Concept 3: Interdependence of Organisms	<ul style="list-style-type: none"> • What are the major abiotic factors that 	I will be able to:	<ul style="list-style-type: none"> • Sediment • Littoral zone • Limnetic zone

<ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>P.O. 2: Describe how organisms are influenced by a particular combination of biotic and abiotic factors in an environment.</p>	<p>determine the aquatic ecosystems?</p> <ul style="list-style-type: none"> • What are transitional aquatic ecosystems and why are they important? • What are the zones of marine ecosystems? • What are the characteristics of populations and how they are distributed? 	<ul style="list-style-type: none"> • Identify the major factors that determine the aquatic ecosystems. • Describe the transitional aquatic ecosystems. • Explain the importance of transitional aquatic ecosystems • Identify the zones of marine ecosystems. • Describe the characteristics of population and hoe they are distributed. 	<ul style="list-style-type: none"> • Plankton • Pro-fundal zone • Wetlands • Estuary • Intertidal zone • Photic zone • Aphotic zone • Benthic zone • Abyssal zone • population
<p>Week 7</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Strand 4: Life Science Concept 3: Interdependence of Organisms</p> <p>P.O. 3: Assess how the size and the rate of growth of a population are determined by birth rate, death rate, immigration, emigration, and carrying capacity of the environment.</p>	<ul style="list-style-type: none"> • What are the differences between density-independent and density-dependent limiting factors? • What are the similarities between the different models used to quantify the growth of a population? • How does carrying capacity affect 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Compare density-independent and density-dependent limiting factors. • Describe the similarities between different models used to quantify the growth of a population. • Define carrying capacity. • Describe how does carrying capacity affect reproductive rates. • Identify the aspects affect human population growth. 	<ul style="list-style-type: none"> • Population density • Dispersion • Density-independent factor • Density-dependent factor • Population growth rate • Emigration • Immigration • Carrying capacity • Demography • Demographic transition • Zero population growth

		<p>reproductive rates?</p> <ul style="list-style-type: none"> • What aspects affect human population growth? • What are the trends in human population growth? • What are the age structures of representative non-growing, slowly growing and rapidly growing countries? • What might be the consequences of continued population growth? 	<ul style="list-style-type: none"> • Describe the trends in human population growth. • Identify the age structures that represent the non-growing, slowly growing and rapidly growing countries. • Predict the consequence of continued population growth. 	<ul style="list-style-type: none"> • Age structure
--	---	--	---	---

<p>Week 8</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Strand 3: Science in Personal and Social Perspectives Concept 1: Changes in Environment P.O.5: Evaluate the effectiveness of conservation practices and preservation techniques on environmental quality and biodiversity.</p>	<ul style="list-style-type: none"> • What are the three types of biodiversity? • Why is biodiversity important? • What are the direct and indirect values of biodiversity? • What are the threats to biodiversity? • How is the current extinction rate different from the background extinction rate? • How does the decline of a single species affect an entire ecosystem? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Identify the three types of biodiversity. • Explain the importance of biodiversity in the ecosystem. • Compare direct and indirect values of biodiversity. • Describe the different threats to biodiversity. • Explain how the current extinction rate different from the background extinction rate. • Describe how the decline of a single species affects an entire ecosystem. 	<ul style="list-style-type: none"> • Extinction • Biodiversity • Genetic diversity • Species diversity • Ecosystem diversity • Background extinction • Mass extinction • Natural resources • Overexploitation • Habitat fragmentation • Edge effect • Biological magnification • Eutrophication • Introduced species
<p>Week 9</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Strand 3: Science in Personal and Social Perspectives Concept 1: Changes in Environment P.O.5: Evaluate the effectiveness of conservation practices and preservation techniques on environmental quality and</p>	<ul style="list-style-type: none"> • What are the two classes of Natural Resources? • What are the methods used to 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Identify the two classes of Natural Resources. • Describe the methods used to conserve biodiversity. 	<ul style="list-style-type: none"> • Renewable resources • Nonrenewable resources • Sustainable use • Endemic

	<p>biodiversity.</p>	<p>conserve biodiversity?</p> <ul style="list-style-type: none"> • What are the two techniques used to restore biodiversity? 	<ul style="list-style-type: none"> • Name and describe the two techniques used to restore biodiversity. 	<ul style="list-style-type: none"> • Bioremediation • Biological augmentation

<p>3rd Quarter</p> <p>Week 1</p> <ul style="list-style-type: none"> • Resource Book • Power Point Presentation • Work Sheets 	<p>Strand 4: Life Science Concept 2: Molecular Basis of Heredity</p> <p>P.O. 2: Describe the molecular basis of heredity, in viruses and living things, including DNA replication and protein synthesis.</p>	<ul style="list-style-type: none"> • How can genetic patterns be analyzed to determine dominant or recessive inheritance patterns? • What are examples of dominant and recessive disorders? • How can human pedigrees be constructed from genetic information? • What are the differences between various complex inheritance patterns? • How can sex-linked inheritance patterns be analyzed? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Describe genetic pattern that determine dominant or recessive inheritance patterns. • Name examples of dominant and recessive disorders. • Explain how human pedigrees be constructed from genetic variation • Describe the different complex inheritance pattern. • Explain how can sex-linked inheritance patterns be analyzed. 	<ul style="list-style-type: none"> • Carrier • pedigree • Incomplete dominance • Codominance • Multiple alleles • Epistasis • Sex chromosome • Autosome • Sex-linked trait • Polygenic trait
--	--	---	---	--

		<ul style="list-style-type: none"> • How can the environment influence the phenotype of an organism? 		
<p>Week 2</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Strand 4: Life Science Concept 2: Molecular Basis of Heredity</p> <p>P.O. 3: Explain how genotypic variation occurs and results the phenotypic diversity.</p>	<ul style="list-style-type: none"> • How are karyotypes used to study genetic disorders? • What is the role of telomeres? • How is nondisjunction related to Down syndrome and other abnormal chromosome numbers? • What are the benefits and risks of diagnostic fetal testing? • Which experiments led to the discovery of DNA as the genetic material? • What is the basic structure of DNA? • What is the basic structure of eukaryotic chromosomes? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Define karyotypes and it's importance in the study of genetic disorders. • Describe telomeres. • Relate nondisjunction to Down syndrome and other abnormal chromosome numbers. • Explain the benefits and risks of diagnostic fetal testing. • Identify the experiments that led to the discovery of DNA as the genetic material. • Describe the basic structure of DNA. • Identify the basic structure of eukaryotic chromosomes. 	<ul style="list-style-type: none"> • Karyotype • Telomere • Nondisjunction • Double helix • nucleosome

<p>Week 3</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Strand 4: Life Science Concept 2: Molecular Basis of Heredity P.O. 1: Analyze the relationships among nucleic acids (DNA,RNA), genes, and chromosomes</p> <p>P.O. 2: Describe the molecular basis of heredity, in viruses and living things, including DNA replication and protein synthesis.</p>	<ul style="list-style-type: none"> • What is the role of enzymes in the replication of DNA? • How are leading and lagging strands synthesized differently? • How does DNA replication compare in eukaryotes and prokaryotes? • How are messenger RNA, ribosomal RNA, and transfer RNA involved in the transcription and translation of genes? • What is the role of RNA polymerase in the synthesis of messenger RNA? • How is the code of DNA translated into messenger RNA and utilized to synthesize a protein? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Describe the role of enzymes in the replication of DNA. • Explain how are leading and lagging strands synthesized differently. • Compare DNA replication of eukaryotes and prokaryotes. • Explain how mRNA, rRNA and tRNA involved in the transcription and translation of genes. • Describe the role of RNA polymerase in the synthesis of mRNA? • Explain how is the code of DNA translated into mRNA and utilized to synthesize a protein. 	<ul style="list-style-type: none"> • Semiconservative replication • DNA polymerase • Okazaki fragment • RNA • Messenger RNA • Ribosomal RNA • Transfer RNA • Transcription • RNA polymerase • Intron • Exon • Codon • Translation
---	--	--	--	--

<p>Week 4</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Strand 4: Life Science Concept 2: Molecular Basis of Heredity</p> <p>P.O. 1: Analyze the relationships among nucleic acids (DNA, RNA), genes, and chromosomes.</p> <p>P.O. 3: Explain how genotypic variation occurs and results in phenotypic diversity.</p>	<ul style="list-style-type: none"> • How are bacteria able to regulate their genes by two types of operons? • How do eukaryotes regulate the transcription of genes? • What are the various types of mutations? • How is selective breeding used to produce organisms with desired traits? • What are similarities and differences between inbreeding and hybridization? • How does a Punnett square test cross help assess the genotypes of organisms? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Describe how bacteria regulates their genes by two types of operons. • Describe how eukaryotes regulate the transcription of genes. • Identify the various types of mutations. • Explain how selective breeding used to produce organisms with desired traits. • Compare inbreeding and hybridization. • Explain how Punnett square test cross help assess the genotypes of organisms. 	<ul style="list-style-type: none"> • Gene regulation • Operon • Mutation • Mutagen • Selective breeding • Inbreeding • Test cross
<p>Week 5</p> <ul style="list-style-type: none"> • Resource Book • Power Point 	<p>Strand 4: Life Science Concept 2: Molecular Basis of Heredity</p> <p>P.O. 3: Explain how genotypic</p>	<ul style="list-style-type: none"> • What are the different tools and processes used in genetic engineering? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Describe the different tools and processes used in genetic engineering. 	<ul style="list-style-type: none"> • Genetic engineering • Genome • Restriction enzyme • Gel electrophoresis • Recombinant DNA

<p>presentation</p> <ul style="list-style-type: none"> Worksheets 	<p>variation occurs and results in phenotypic diversity.</p>	<ul style="list-style-type: none"> How does genetic engineering manipulate recombinant DNA? What are the similarities between selective breeding and genetic engineering? How can genetic engineering and biotechnology be used to improved human life? 	<ul style="list-style-type: none"> Explain how genetic engineering manipulate recombinant DNA. Compare selective breeding and genetic engineering? Explain how genetic engineering and biotechnology be used to improved human life. 	<ul style="list-style-type: none"> Plasmid DNA ligase Transformation Cloning Polymerase chain reaction Transgenic organism
<p>Week 6</p> <ul style="list-style-type: none"> Resource Book Power Point presentation Worksheets 	<p>Strand 4: Life Science Concept 2: Molecular Basis of Heredity</p> <p>P.O. 3: Explain how genotypic variation occurs and results in phenotypic diversity.</p>	<ul style="list-style-type: none"> What are the components of the human genome? How do forensic scientists use DNA fingerprinting? How can information from the human genome be used to treat human diseases? 	<p>I will be able to:</p> <ul style="list-style-type: none"> Identify the components of the human genome. Explain how forensic scientists use DNA fingerprinting. Describe how can information from the human genome be used to treat human diseases. 	<ul style="list-style-type: none"> DNA fingerprinting Bioinformatics DNA microarray Single nucleotide polymorphism Haplotype Pharmacogenomics Gene therapy Genomics proteomics
<p>Week 7</p> <ul style="list-style-type: none"> Resource Book Power Point 	<p>Strand 4: Life Science Concept 4: Biological Evolution</p> <p>P.O. 3: Describe how the continuing operation of natural selection underlies a population's</p>	<ul style="list-style-type: none"> How do the characteristics of plants and green algae compare? What are the adaptations of 	<p>I will be able to:</p> <ul style="list-style-type: none"> Compare the characteristics of plants and green algae. 	<ul style="list-style-type: none"> Stomata vascular tissue vascular plant nonvascular plant seed

<p>presentation</p> <ul style="list-style-type: none"> Worksheets 	<p>ability to adapt to changes in the environment and leads to biodiversity and the origin of new species.</p>	<p>plants to land environments?</p> <ul style="list-style-type: none"> What is the importance of vascular tissue to plant life on land? What is the alternation of generations of plants? What are divisions of the plant kingdom? 	<ul style="list-style-type: none"> Identify the adaptations of plants to land environment. Explain the importance of vascular tissue to plant life on land. Describe the alternation of generations of plants. Identify the divisions of plant kingdom. 	
<p>Week 8</p> <ul style="list-style-type: none"> Resource Book Power Point presentation Worksheets 	<p>Strand 4: Life Science Concept 4: Biological Evolution</p> <p>P.O. 3: Describe how the continuing operation of natural selection underlies a population's ability to adapt to changes in the environment and leads to biodiversity and the origin of new species</p>	<ul style="list-style-type: none"> What are the major types of plant cells? What are the major types of plant tissues? What are the differences among the functions of plant cells and tissues? 	<p>I will be able to:</p> <ul style="list-style-type: none"> Describe the different types of plant cells. Identify the major types of plant tissues. Compare the functions of plant cells and tissues. 	<ul style="list-style-type: none"> Parenchyma cell Collenchyma cell Sclerenchyma cell Meristem Vascular cambium Cork cambium Epidermis Guard cell Xylem vessel element Tracheid Phloem Sieve tube member Companion cell Ground tissue
<p>Week 9</p>	<p>Strand 4: Life Science Concept 4: Biological Evolution</p>	<ul style="list-style-type: none"> How are the structures of roots, stems, and leaves 	<p>I will be able to:</p> <ul style="list-style-type: none"> Describe how structures of roots, 	<ul style="list-style-type: none"> Root cap Cortex Endodermis Pericycle

<ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>P.O. 3: Describe how the continuing operation of natural selection underlies a population’s ability to adapt to changes in the environment and leads to biodiversity and the origin of new species</p>	<p>related to their functions?</p> <ul style="list-style-type: none"> • How the structures and functions of roots do, stems, and leaves compare? 	<p>stems, and leaves related to their functions.</p> <ul style="list-style-type: none"> • Explain how the structures and functions of roots, stems and leaves compare. 	<ul style="list-style-type: none"> • Petiole • Palisade mesophyll • Spongy mesophyll • transpiration
Timeline & Resources	AZ College and Career Readiness Standard	Essential Question (HESS Matrix)	Learning Goal	Vocabulary (Content/Academic)
<p>4th Quarter</p> <p>Week 1</p> <ul style="list-style-type: none"> • Resource Book • Power Point Presentation • Work Sheets 	<p>Concept 4: Biological Evolution Understand the scientific principles and processes involved in biological evolution.</p> <p>P.O. 1: Identify the components of natural selection which can be lead to speciation</p>	<ul style="list-style-type: none"> • What is Evolution? • What are the three geological theories? • Who is Charles Darwin? How does he arrive at his idea about species variation? • How Darwin discoveries supported ancient Earth history? 	<p>I will able to:</p> <ul style="list-style-type: none"> • Examine early ideas about evolution. • Identify three geological theories that influenced scientific debate over evolution. • Describe how Darwin arrived at his idea about species variation. • Recognize how Darwin’s discoveries supported Lyell’s ancient-Earth theory. 	<ul style="list-style-type: none"> • Evolution • Species • Fossil • Catastrophism • Gradualism • Uniformitarianism • Variation • Adaptation

<p>Week 2</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Concept 4: Biological Evolution Understand the scientific principles and processes involved in biological evolution.</p> <p>P.O. 1: Identify the components of natural selection which can be lead to speciation</p>	<ul style="list-style-type: none"> • What is the difference between artificial selection and natural selection? • What are the four principles of Natural Selection? • How does the major sources affect the evidence of evolution? • What are the different types of evidence that support evolution? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Compare artificial selection to natural selection. • Examine the factors Darwin considered in forming his theory of Natural Selection. • Summarize the four principles of Natural Selection • Recognize the major sources of evidence for evolution. • Examine the pattern of features that reveal the history of a species. • Summarize different types of evidence that support evolution. 	<ul style="list-style-type: none"> • Artificial Selection • Heritability • Natural Selection • Population • Fitness • Biogeography • Homologous structure • Analogous structure • Vestigial structure • Paleontology
<p>Week 3</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Concept 4: Biological Evolution Understand the scientific principles and processes involved in biological evolution.</p> <p>P.O. 2: Explain how genotypic and phenotypic variation can result in adaptations that influence an organism’s success in an environment.</p>	<ul style="list-style-type: none"> • What is the importance of evolution? • What is the significance of genetic variation within a population? • How Natural Selection acts on distribution of traits in a population? • How gene flow, genetic drift and 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Recognize the importance of evolution in unifying all branches of biological study. • Describe the significance of genetic variation within a population. • Identify sources of genetic variation • Describe how natural selection acts on the distribution of traits in a population. 	<ul style="list-style-type: none"> • Gene pool • Allele frequency • Microevolution • Directional selection • Stabilizing selection • Disruptive selection • Gene flow • Genetic drift • Bottleneck effect • Founder effect • Sexual selection

		sexual selection can lead to the evolution of population?	<ul style="list-style-type: none"> • Explain three ways natural selection can change the distribution of a trait in a population. • Explain how gene flow, genetic drift, and sexual selection can lead to the evolution of population. 	
<p>Week 4</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Concept 4: Biological Evolution Understand the scientific principles and processes involved in biological evolution.</p> <p>P.O. 3: Describe how the continuing operation of Natural Selection underlies a population's ability to adapt to changes in the environment and leads to biodiversity and the origin of new species.</p>	<ul style="list-style-type: none"> • What is Hardy-Weinberg equilibrium? • What are the condition and predictive value of the Hardy-Weinberg equation? • How isolation of populations can lead to speciation? • What are the different types and rates of evolution? • What is extinction? What are the different types and rates of extinction? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Identify the conditions that define Hardy-Weinberg equilibrium. • Explain the predictive value of Hardy-Weinberg equation. • Explain how isolation of populations can lead to speciation. • Describe how populations can become isolated. • Describe different types and rates of evolution • Compare different types and rates of extinction. 	<ul style="list-style-type: none"> • Hardy-Weinberg equilibrium • Reproductive isolation • Speciation • Behavioral isolation • Geographic isolation • Temporal isolation • Convergent evolution • Divergent evolution • Coevolution • Extinction • Punctuated equilibrium • Adaptive radiation

<p>Week 5</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Concept 4: Biological Evolution Understand the scientific principles and processes involved in biological evolution.</p> <p>P.O. 5: Analyze how patterns in the fossil record, nuclear chemistry, geology, molecular biology and geographical distribution give support to the theory of organic evolution through natural selection over billions of years and the resulting present day biodiversity.</p>	<ul style="list-style-type: none"> • What is fossil? How fossils can form? • What is the difference between relative dating and absolute dating techniques? • What is geologic time scale? • What is the condition on Earth billions of years ago? • What are the different hypotheses of how life begun on Earth? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Describe the ways that fossils can form. • Identify the use of relative dating and absolute dating techniques. • Recognize the role of index fossils in determining the age of rocks. • Identify the major intervals of the geologic time scale. • Describe the conditions on Earth billions of years ago. • Summarize the main hypotheses of how life began on Earth. • Recognize the role of microbes played in shaping life on Earth. 	<ul style="list-style-type: none"> • Relative dating • Radiometric dating • Isotope • Half life • Index fossil • Geologic time scale • Era • Period • Epoch • Nebula • Ribozyme • Cyanobacteria • endosymbiosis
<p>Week 6</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Concept 4: Biological Evolution Understand the scientific principles and processes involved in biological evolution.</p> <p>P.O. 4: Predict how a change in an environmental factor can affect the number and diversity of species in an ecosystem.</p>	<ul style="list-style-type: none"> • What is endosymbiosis theory? • How will you relate increased biodiversity to sexual reproduction? • What are the key events in the Paleozoic, Mesozoic, and Cenozoic Eras? • How changes in environmental 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Summarize the theory of endosymbiosis. • Relate increased biodiversity to sexual reproduction. • Summarize the key events in the Paleozoic, Mesozoic, and Cenozoic eras. • Identify how changes in environmental conditions affected the evolution and radiation of animal groups. 	<ul style="list-style-type: none"> • Paleozoic • Cambrian explosion • Mesozoic • Cenozoic • Primate • Prosimian • Anthropoid • Hominid • Bipedal

		<p>conditions affect the evolution and radiation of animal groups?</p> <ul style="list-style-type: none"> • What are the events and forces that shaped human evolution? 	<ul style="list-style-type: none"> • Examine the evolutionary relationships between humans and other primates. • Recognize the names and relative ages of extinct hominids. • Summarize the events and forces that shaped human evolution. 	
<p>Week 7</p> <ul style="list-style-type: none"> • Resource Book • Power Point presentation • Worksheets 	<p>Concept 4: Biological Evolution Understand the scientific principles and processes involved in biological evolution.</p> <p>P.O. 6: Analyze using a biological classification system, the degree of relatedness among various species.</p>	<ul style="list-style-type: none"> • Who is Carolus Linnaeus? What is the scientific naming system developed by Linnaeus? • What is cladistics? • How molecular evidence reveals species relatedness? • What are the two types of molecular clocks? • What are the 3 domains in the tree of life? 	<p>I will be able to:</p> <ul style="list-style-type: none"> • Examine the scientific naming system developed by Linnaeus. • Identify the limitations of the Linnaeus system. • Describe classification by cladistics. • Summarize how molecular evidence reveals species relatedness. • Describe two types of molecular clocks: mitochondrial DNA and ribosomal RNA. • Describe classification as a work in progress. • Identify the three domains in the tree of life as Bacteria, Archaea, and Eukarya? 	<ul style="list-style-type: none"> • Taxonomy • Taxon • Binomial Nomenclature • Genus • Phylogeny • Cladistics • Cladogram • Derived character • Molecular clock • Mitochondrial DNA • Ribosomal RNA • Bacteria • Archaea • Eukarya •
